Same Day Appoinments | **Walk-ins Welcome**

High Field MRI (1.5T)

Ultrasound

Diagnostic X-Ray

Digital Mammography

We provide unsurpassed imaging services, with the comfort and convenience of an outpatient facility.

Hours of Operation

Open 7 days a week
Monday - Friday :
8 AM - 8 PM
Saturday & Sunday :
9AM - 4PM
Early appointments and late evening appointments available.

Preparing Is Easy

High Field MRI (I.5T)

There is no need to alter your diet or medication prior to the MRI. You will be asked to change into a gown or simply wear comfortable loose clothing that has no metallic parts (zippers, clasps, buttons, rhinestones, etc). You will also need to remove the following items:

- Eyeglasses
- Keys
- Wallet
- Hearing Aid
- Credit Cards a Jewelry
- Dentures
- Coins a Hair Pins and other metallic or metal containing objects.

Ultrasound

Abdominal: Nothing by mouth 4 hours before exam Pelvic / OB: Drink 32 oz of water one hour prior to exam. You must drink all 32 oz within 30 minutes. Do not urinate.

Diagnostic X-Ray

No preparation required.

Digital Mammography

Mammography is an extremely sensitive imaging modality, so don't use deodorant or apply powders, creams or ointment to your breast or underarms on the day of your examination. A residue from these substances could give a false result. Because you will need to remove your clothing from the waist up, wearing a two-piece outfit, rather than a dress is suggested. Check with your healthcare provider about any other requirements.

RARITAN BAY DIAGNOSTIC IMAGING

About MRI

Magnetic Resonance Imaging (MRI) has become a preferred method for diagnosing potential problems in many different parts of the body. While x-rays are best for showing bones, MRI creates pictures that can show differences between healthy and unhealthy tissue - like organs, muscle, cartilage, ligaments, and tendons in many parts of the body. That means MRI is helpful when looking at the brain, heart, spinal column, breast, abdomen, pelvic region and joints.

The MRI Procedure

The examination itself is performed in a room that houses the MRI equipment. The patient lies down on a comfortably padded table. While the scanner is operating, you will hear some humming and occasional thumping sounds. These are normal. The most important thing is to relax. Most exams take between 30 minutes, depending on the amount of scans needed. Family members or persons accompanying the patient can sit nearby, while the test is being performed.

Note :

Patients with the following may not qualify for an MRI:

- Pacemaker
- Artificial Heart Valve
- Aneurysm Clips
- Cochlear Implants
- Intrauterine Device (IUD)

RARITAN BAY DIAGNOSTIC IMAGING

About Ultrasound

Our new and highly advanced Hitachi Hi-Vision 5500 provides the most advanced ultrasound images available. The exam is a short and pain-free procedure conducted in our newly decorated facility. Our advanced system performs routine and high-risk obstetrical and gynecological exams. Additionally, general. abdominal examinations, color Doppler, Angiography and 3D renderings are performed using this system.

About Diagnostic X-Ray

Our system allows us to perform a full range of table, wall-stand, wheelchair and stretcher exams. Image quality is outstanding, particularly with our new AGFA-CR. that produces digital images which enhance the quality of the X-Ray.

About Digital Mammography

Mammography has proven to be the best way to find breast cancer in the very early stages, before symptoms occur and when the cure rates are very high. In fact, a recent 5-year detection study involving 28q,000 women showed that mammography, more than any other method, was able to find cancers before they had spread beyond the breast. Mammography uses extremely minimal levels of radiation to create an image of the breast. The procedure is performed by a specially trained technologist and is interpreted by a radiologist who will report the results to your healthcare provider.
